# Mixed-relay project

- Objectives
- Physiological and performance profile
- Training tips
- Lifestyle
- Mind-set
- Selection policy and procedures
- Program

- Developing a world class mixed-relay team (3 men, 3 women) for OS Tokyo and beyond
- Increasing our knowledge and understanding of the MXT
- Encourage athletes and coaches to be engaged and develop their potential.

Show your potential

Develop your potential

Make it to the OOOOO team

# Physiological- and performance profile

mixed-relay - supersprint – sprint – standard distance – 70.3 - Ironman

## Key Performance indicators (KPI)

	MXR	SS	S	SD	70.3	IM
S100 (FRC)	*****	*****	***	**	**	**
S200 (FRC/VO <sub>2</sub> max)	*****	*****	*****	*****	***	***
S400 (VO <sub>2</sub> max)	*****	*****	*****	*****	*****	*****
S1500 (FTP-MLSS)	**	**	***	****	****	*****
P1' (FRC)	*****	*****	*****	*****	*	*
P5' (VO <sub>2</sub> max)	*****	*****	*****	*****	*****	*****
P20' (FTP-MLSS)	****	****	*****	*****	*****	*****
P180' (MFOR)	*	*	*	*	***	*****
R400 (FRC)	***	***	**	*	*	*
R1.500 (FRC/VO <sub>2</sub> max)	*****	*****	*****	*****	**	**
R3.000 (VO <sub>2</sub> max)	*****	*****	*****	*****	*****	*****
R10.000 (FTP-MLSS)	***	***	****	*****	*****	*****

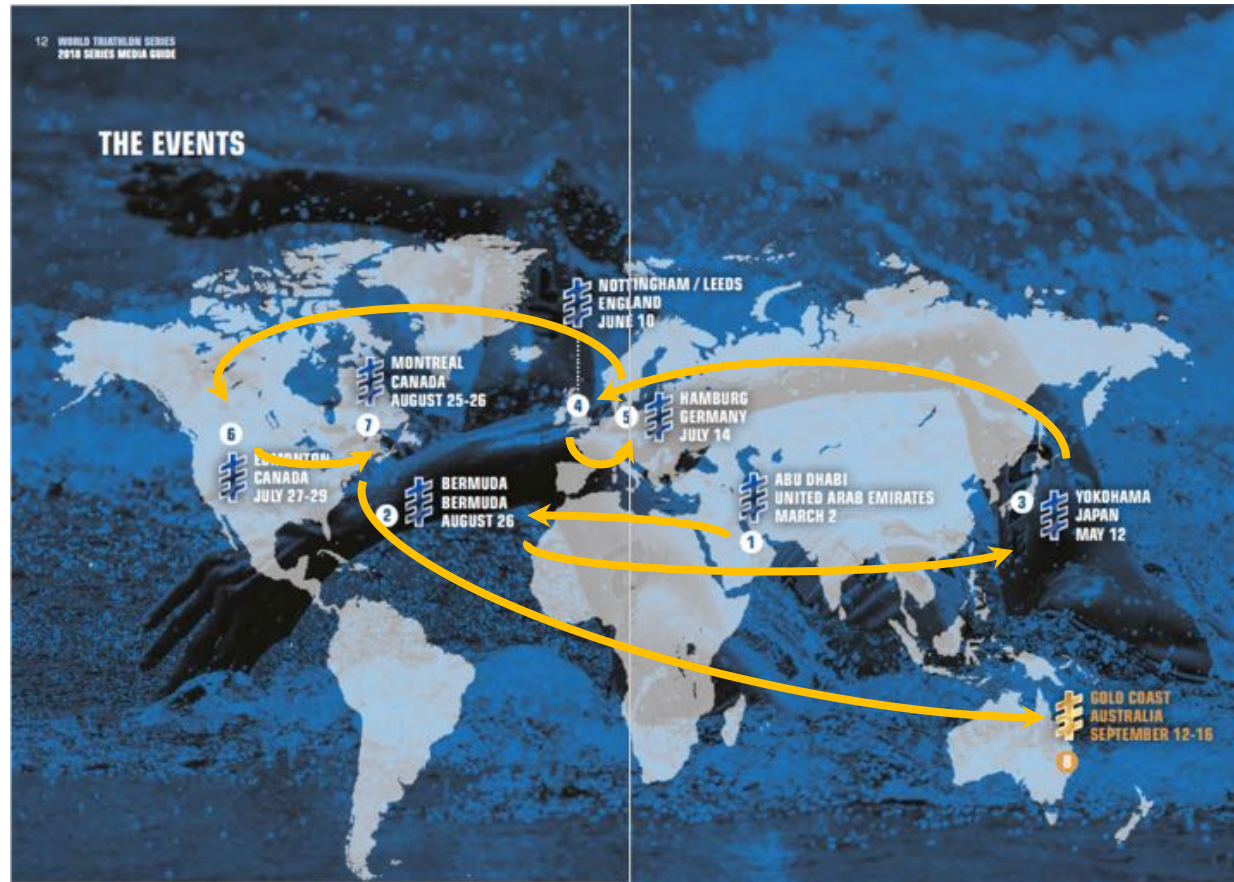

## The 'ideal' mixed-relay athlete ...

- Aerobic profile ( $\text{VO}_2\text{max}$ , fast recovery during multi-race weekends)
- Fast and resilient (FRC)
- Skilful (fast transitions, highly skilled on the bike, ...)
- Stress resilient (able to perform at desired moment)
- Efficient (able to convert potential into world class race results)
- Race intelligence
- Team player (willing to contribute to the team's success as the first priority)
- Healthy, also in challenging circumstances
- Strong digestive system

**At elite level, the ideal mixed-relay athlete is not much different from the world class standard distance athlete.**

# Physiological- and performance profile

*Conclusions Air travel and competition are major risk factors for acute respiratory tract and gastrointestinal symptoms in this population. Athletes who have large fluctuations in training load experience such symptoms more frequently. Shorter duration of symptoms appears to be associated with success in cross-country skiing. (Br J Sports Med, 10, 2016)*

- **Train polarized**
  - Basic endurance for +80% training volume
  - High intensity for 10-20% training volume. Focus on 1-5min peak effort development (FRC-VO<sub>2</sub>max)
- **Train skills**
  - Pontoondives from a running start
  - Swim exits
  - Transitions
  - Bike skills
- **Consistent training**
- **Build race experience.** Short distance races.  
Swim/bike/run/multisport
- **Monitor training effects.** 3VL offers Trainingpeaks® accounts and the Inscyd® evaluationplatform for athletes accepted to the project.

## ***The importance of 1" in T1 ...***

*Do you know that 1 sec ....*

*@ 40kph means 11,1m?*

*@ 50kph: 13,9m*

*@ 55kph: 15,3m*

*How much effort does it take to close a gap of 11,1-15,3m @40-55kph?*

## ***The importance of 1" in T2 ...***

*Do you know that 1 sec ....*

*@ 19kph means 5,3m?*

*@ 21kph: 5,8m*

*How much effort does it take to close a gap of 5,3-5,8m @19-21kph?*

***It really matters to train for a 1 sec faster transition.***

- Do the basics extremely well
  - Nutrition
  - Sleep
  - Travel health
  - Body and mind
  - ...
- Championship athletes
  - Develop recovery strategies based on current scientific knowledge that gives you the extra edge on multiple day competitions

Do the basics well  
*Key messages for talent development*

## Outward versus Inward Mindset

**NOT**

**BUT**

***DEAL WITH IT !***

## Selection policy Team Belgium - Olympic Games Tokyo (model II)

1. Athletes for the Olympic triathlon team need to be eligible according to ITU rules.
2. All earned spots will be assigned.

# TO BE ANNOUNCED

3. Athletes for the Olympic triathlon team will be selected on the basis of their Olympic spots quota on the selection list based on peak performance and performance history during the Olympic qualification period. Only European Championships, UCI World Triathlon and Olympic test events will be considered.

4. Athletes that don't meet the criteria as mentioned in 3. can be assigned an Olympic spot. The selection will be based on the performance profile (peak performance, performance density, race readiness, race tactics) or any other element that potentially can influence a performance (Top 8 level) during the Olympic Games.

5. In the case Belgium has earned a BIP spot for the Olympic Games, the selection for the mixed team relay event will be based on the performance profile (peak performance, performance density, race readiness, race tactics) or any other element that potentially can influence a performance (Top 8 level) during the Olympic Games.

7. The Belgian Olympic Committee has the final decision on the composition of the Tokyo Olympic team, and can decide not to follow the advice of the Belgian Triathlon Selection Commission.

Simulation OG Tokyo - individual ranking

$3.500 = 12 * T16 \text{ WTS/SD} - 2.200 = 12 * T22 \text{ WTS/SD}$

- National test February 25
- Training and testing days: May : 5-6, August 2-3, September 9 (3VL talent day)
- ITU Mixed relay series
- EC Glasgow
- Participation in Mixed relays during EC youth, juniors and U23 will be considered
- Super league junior races (on invitation)
- Training camps:
  - Olympic committee Lanzarote (elite)
  - Olympic committee Vittel (juniors)
  - Development camps in collaboration with team GB Rio Maior
- Support from federation partnerships
  - Trainingpeaks / Bioracer / Inscyd / Polar / Sportscontrol
